V) Symposium Topics

Discussions and debates were conducted focusing at the main congress theme - the cause of Type 1 Diabetes -, particularly the antigen in autoimmunity as well as the important functionality of Regulatory T cell and Innate immunity. On the other hand, regarding Fulminant Type 1 Diabetes and Slowly-progressive Type 1 Diabetes, which have been recently identified in Japan as the subtype of Type 1 Diabetes, the origin and treatment were discussed with references to both local and overseas cases. Also, discussions were dedicated to the transposable genetic elements that play a critical role for the development of Type 1 Diabetes.

VII) Result and Prospect in future

The international conference on the cause and treatment for Type 1 Diabetes, 8th Meeting of the Immunology of Diabetes Society (IDS-8) was successfully taken place and it was a great honor and pleasure to organize this meeting in Japan as the Convenor. A total of 220 people participated, out of which 65 percent from overseas. We were pleased to see the enthusiastic responses from all delegates on each topic, during the interactive debates and discussions in both symposiums and poster presentations. A lot of new perspectives were bloomed during the meeting and we believe that these would certainly lead to the long awaited cure for the patients of Type 1 Diabetes in the near future.
